Professional Summary

Full-stack engineer with 5+ years of production experience, specialising in React and TypeScript frontends. Proven track record delivering across diverse domains — healthcare platforms, e-commerce, SaaS, and CMS-driven sites — with a strong eye for performance, clean architecture, and maintainable code. Comfortable owning features end-to-end, from API design to polished UI, and thriving in cross-functional Agile teams.

Skills

Languages: JavaScript · TypeScript · Java · Python · PHP

Frontend: React · Next.js · Vue.js · Angular · Web Components · Web APIs · SEO · A11y · Tailwind · SASS · GSAP · Motion · React Spring

Backend: Koa · Express · FastAPI · Spring Boot · WordPress

Data & Infra: PostgreSQL · MySQL · Prisma · TypeORM · Knex · AWS · Azure · Docker · Storyblok

Testing & Tooling: Jest · Cucumber · Playwright · React Query · TRPC · Zod · i18n · Storybook · Figma · Git · Jira · Notion

Spoken Languages: English (C1) · French (B2) · German (A1) · Arabic (Native)

Methodology: Scrum · Kanban · Clean Code · Component-driven development · Automated testing

Experience

Originator Inc

Oct 2025 — Jan 2026

Full-Stack Engineer(Freelance)

France (remote)

Worked on a SaaS platform for generating and reviewing training and evaluation data for AI agents running on open-source software, combining automated verification with human-in-the-loop reviews, and contributed to the design, creation, and review of evaluation problems, improving dataset quality and evaluation reliability.

Prometheus

AI data training platform

- Implemented role-based workflows for reviewer onboarding, task assignment, performance tracking.
- Built interfaces to audit AI agent task attempts, including structured transcripts and annotated screenshots.
- Developed an admin dashboard to manage task distribution, reviewer training, and operational oversight.
- Designed a task-centric UI using Tailwind CSS to reduce cognitive load and improve review efficiency.
- Contributed to the creation of evaluation tasks and conducted quality reviews.

Stack: React · TypeScript · Tailwind CSS · Supabase · AWS · React Query · Python

Konekto

Aug 2022 — Aug 2025

Full-Stack Engineer

Germany (remote)

Delivered production-ready features across 7 client projects in healthcare, e-commerce, and CMS. Built configurable Storyblok UIs, optimized caching, implemented feature flags, referral tracking, Amazon S3 storage, and Mollie payment integration. Maintained automated tests within Agile cross-functional teams.

Klenico

Online mental health platform

- Developed a flexible Storyblok design system that empowered managers to customize components, pages, and workflows independently, reducing developer dependency for content updates
- Integrated the Mollie payment API to enable secure, scalable payment processing, including transaction handling, webhooks, and payment status management.
- Designed and built intuitive admin dashboards that visualized (KPIs), enabling data-driven decision-making.
- Engineered Node.js CLI tools automating TypeScript type generation and component scaffolding.
- Drove 100%+ improvement in page load speeds by implementing a comprehensive caching solution for external data sources and optimizing rendering strategies

Stack: Next · React · Node · Storyblok · Prisma · TRPC · React Query · styled-components · Framer Motion · Jest · Docker

Atlas.ti(License management system)

Qualitative data analysis platform

- Built a progressive referral system with multi-step reward acquisition and automated tracking.
- Developed granular feature flag system with account-level targeting for canary releases and A/B testing.
- Optimized query performance by implementing indexing strategies and intelligent query execution logic
- Implemented admin dashboard with real-time analytics and operational controls for data-driven decisions.
- Authored and maintained Jest unit tests for critical services, preventing regressions and ensuring system stability.

Stack: React · Node · Koa · Knex · OpenAPI · Storybook · styled-components · Jest · Cucumber · Amazon S3 · Docker

Printmate
Customizable print-on-demand platform

- Engineered and delivered high-quality user-facing features in a production React application, optimizing for performance, accessibility, and seamless user experience.
- Built dynamic, interactive UI workflows for box configuration (sizes, designs), enhancing usability and reducing friction in the customization process.
- Architected and scaled a reusable component system using Storybook, standardizing UI patterns and accelerating feature delivery across the codebase.
- Improved codebase reliability by contributing comprehensive unit and component tests with Jest, reinforcing maintainability and reducing regression risk.

Stack: React · Storybook · i18n · styled-components · Docker · Jest

Nays
E-commerce platform

- Built a flexible Web Component library for Shopify themes, enabling non-technical users to implement and customize complex features through a simple configuration interface.
- Engineered an interactive store locator with complex filtering; offloaded processing to a Web Worker, preventing main thread blocking and improving page responsiveness.
- Leveraged Shopify Metaobjects to architect a dynamic content system for store customizations and referral program tracking

Stack: Javascript · Liquid · HTML · CSS · Web Component · Shopify · Mapbox

Ambivation
Startup scouting

- Built reusable, plug-and-play dynamic components to ensure UI consistency across the website and streamline content management workflows for non-technical users.
- Designed a custom CSS-variable–based design system for scalable, maintainable, and themeable interfaces.
- Optimized layouts and styles across all viewports, enhancing usability and delivering a seamless user experience.

Stack: WordPress · PHP · Avada · Javascript · CSS

One Gate Africa
May 2021 — Mar 2022

Software Engineer Intern — Tunisia

Engineered a real-time mobile platform connecting clients with towing services, featuring live vehicle tracking, seamless in-app communication, and integrated rating and reporting systems to optimize service quality and operational efficiency.

Remorkini
Real-time fleet management and dispatch platform

- Architected and delivered a real-time logistics platform connecting clients and car towers, enhancing service efficiency and improving end-user experience.
- Developed robust communication services enabling seamless interactions between clients and car towers within the platform.
- Implemented a long-polling mechanism to provide real-time server updates, ensuring timely and reliable data synchronization.
- Designed and deployed a comprehensive rating and reporting system, driving actionable insights and improving service quality.

Stack: Spring Boot · React Native · Reanimated · Expo

Personal Projects

Portfolio
React · Tailwind · React Spring |

- Developed a modern, responsive web portfolio to showcase projects and skills with reusable, well-structured components.
- Emphasized accessibility, performance, and smooth animations to deliver a seamless experience across all devices.

LeetCode CLI
Typescript · Bun Runtime

- Developed a command-line tool to generate and solve LeetCode problems locally, enabling autocomplete, linting, and formatting without paid subscriptions.
- Streamlined workflow for algorithm practice, improving my efficiency productivity.

Studio freight's technical test
Vue 3 · TypeScript · CSS Variables · Vite · HTML5 Validation |

- Translated Figma designs into a pixel-perfect, production-ready UI with precise attention to layout, spacing, and typography.
- Ensured full fidelity across responsive layouts and interactive states, maintaining design consistency.
- Demonstrated meticulous attention to component reusability, accessibility, and overall production-grade coding quality.

Education

ESPRIT 2018 — 2021
Master of Engineering in Software Engineering

IPEIM 2015 — 2018
Preparatory Cycle for Engineering Studies
